

Service Overview: InSite™ Online Proofing

Fineline Printing Group has partnered with Kodak to make InSite online proofing available to our customers. InSite is a secure web-based proofing system through which customers can upload and download jobs and job data.

From there, Fineline preflights and processes the job, placing it directly back onto InSite for you to proof. You view high-resolution files and approve or reject them—without having to wait for hard copy proofs to arrive. This saves you time in sending your files and money on materials.

When proofing, the Smart Review feature allows you to pan, zoom, take measurements, annotate, create change requests, and approve or reject images and pages. What’s more, you can collaborate across multiple sites with multiple users simultaneously.

In addition, Fineline creates a custom home page that reflects your brand.

Benefit & Feature Summary

- All job information is visible in real time and accessible from anywhere over the Internet.
- Lead times, material, and courier costs are reduced via bypassing hard-copy content-proofing cycles.
- Page Flip feature ensures correct pagination on multiple page projects.
- Proofs are in high resolution, ensuring you are viewing what will print.
- Multiple users can “conference” at same time to make changes.
- Changes are viewed by all users.
- New files are uploaded directly to InSite—eliminating the need to use FTP.
- Online platform gives you greater flexibility with late-closing pages or last-minute changes.
- Secure access ensures only authorized users have access to your print jobs.
